Dear Chief:

Re: Recommend Lifting Precautionary Drinking Water Advisory Thunderchild Community Water System

As the water distribution system for all houses on the Thunderchild Water system, had water line depressurization due to pump issues at the Water Treatment Plant, a Precautionary Drinking Water Advisory was recommended June 17, 2025. Water pressure was restored and water treatment plant is operating as normal.

Subsequent testing for chlorine and bacteriological parameters have indicated there is no contamination of the drinking water and the water is safe to drink.

ISC recommends lifting the Precautionary Drinking Water Advisory on Thunderchild First Nation.

Should you have any questions please please contact me, your Environmental Health Officer, Shannon Imhoff at (306) 737-8672.

Sincerely,

Shannon Imhoff
Environmental Health Officer
